

New and Improved AMS Ratcheting Cross-Handle

Double Pawls

- Reduce/eliminate slippage
- Increase longevity of cross handle
- Engage Pawl on each side for ratcheting use
- Engage both pawls on same side for stationary use

Ratcheting Position

When one pawl is in the locked position and the second in the open position, the Cross-Handle is set to ratchet.

Locked Position

When both pawls are in the locked position, the Cross-Handle is not allowed to ratchet.
